

[User Story 642930](#): COMPLETE: Implementation asset tag generation logic

Auto generate the Asset tag when user creates an Asset in Enterprise Asset table

1. Created Before Insert Business Rule for Enterprise Asset[sn_ent_asset] table

- Asset tag creation when asset tag generated then the asset tag should be --> ISO LONG 3 digits. XXXXXXXXX --> 3 Digit ISO long country code - followed by 9-digit number - that is counted from the count field value from the custom table
- When Asset tag is entered in the screen then system should override and replace with the auto numbering.

The screenshot shows the configuration for a business rule named "EAM - Asset Tag Generate & Location Vald". The rule is set to run "before" the "Insert" action on the "Enterprise asset [sn_ent_asset]" table. The "Order" is set to 90. The rule is active and advanced. The filter conditions are set to "Class is not Linear asset".

Business Rule: EAM - Asset Tag Generate & Location Vald

Name: EAM - Asset Tag Generate & Location

Table: Enterprise asset [sn_ent_asset]

Application: Global

Active: ☒

Advanced: ☒

When to run:

Specify whether the business rule should run on Insert or Update. Use Filter Conditions to specify under which conditions the business rule should run.

When:

Order:

Insert: ☒

Update: ☐

Delete: ☐

Query: ☐

Filter Conditions:

Class: is not

- Querying the 'Asset tag generation' table with Site value of Asset location and generating asset tag by combing the ISO long value and 9-digit number padding from count 0
- when asset tag is generated the location taken would be from the location value entered in the location field of asset creation
- Asset tag creation when the count is > 999999999, then error message is displayed on the screen

Business Rule
Update location as needed onInsert

A business rule is a server-side script that runs when a record is displayed, inserted, deleted, or when a table is queried. Use business rules to automatically change values in form fields when the specified conditions are met. [More Info](#)
